

Business Continuity and Disaster Recovery

Keep your business running no matter what happens!

What would happen to your business if your servers or network were suddenly corrupted, damaged or destroyed? Historical data indicates that less than half of businesses that encounter a catastrophic data loss ever recover and most wind up closing their doors.

No one ever thinks that it will happen to them until it does. Exposure to damage from employee tampering, hardware failure, employee mistakes and natural disasters are a reality of business life.

Our BC/DR program removes that burden from your shoulders and insures that experts in the IT field protect your IT investment.

Whether you choose a simple on-premises Disaster Recovery module or select the Off-Site Business Continuity System with Virtual Server access availability for the most extreme scenarios ACT has a plan that can address all of your business continuity concerns at an affordable price.

On-Premises Business Continuity:

No more need for tape backups! All data including your operating system is mirrored in real-time on our StorageStation. Our system provides bare-metal recovery of your entire server or file specific data restoration within minutes.

Off-Premises Disaster Protection:

All data including your operating system is replicated to a dedicated StorageStation located off-site in a secure Data Center. Your entire server environment is protected in the event of a severe business interruption.

Business Continuity Protection with Virtual Services:

Like our Off-Premises Plan, your server is replicated to our secure Data Center but if your facility can not be restored to full functionality, we provide remote access capabilities to your staff so you can run your business on our Virtual Servers.
