

Net Monitor Internet Content Management

Net Monitor Internet Content Management for Business

Stop Inappropriate Internet Use

Are you losing productivity in your business?

Recent studies show that employees waste between 15% and 26% of their workday on non-business related distractions like Internet use. Over 44 percent of employees polled said the lure of the Internet for personal use tends to get the better of them.

While we all like to think that it's the "other guy" that they're talking about, the truth is we really can't be sure how employees spend their day without hovering over their shoulders and who has the time to do that plus your own work?

Worse still, the courts have determined that inappropriate web content left on computers can be considered as creating a hostile work environment for employees and YOU are responsible.

Easily control Internet access in your office

Limit access to on-line porn, gambling, job search, hate sites and other non-business distractions using Net Monitor.

Net Monitor is a simple device that watches your Internet traffic and automatically stops access to sites that you don't want your staff visiting on company time based upon parameters that you establish.

Net Monitor can stop access immediately or simply monitor traffic and report on usage. You can get weekly or monthly reports that show who went where and when.

It's easy and very affordable

Net Monitor makes it all easy and transparent. No expensive hardware to buy, no maintenance headaches! Let us help you establish an appropriate Internet use policy and show you how to control Internet access to maximize productivity in your business.

Complete Protection starting at \$99/month.
